

# First Grade Newsletter

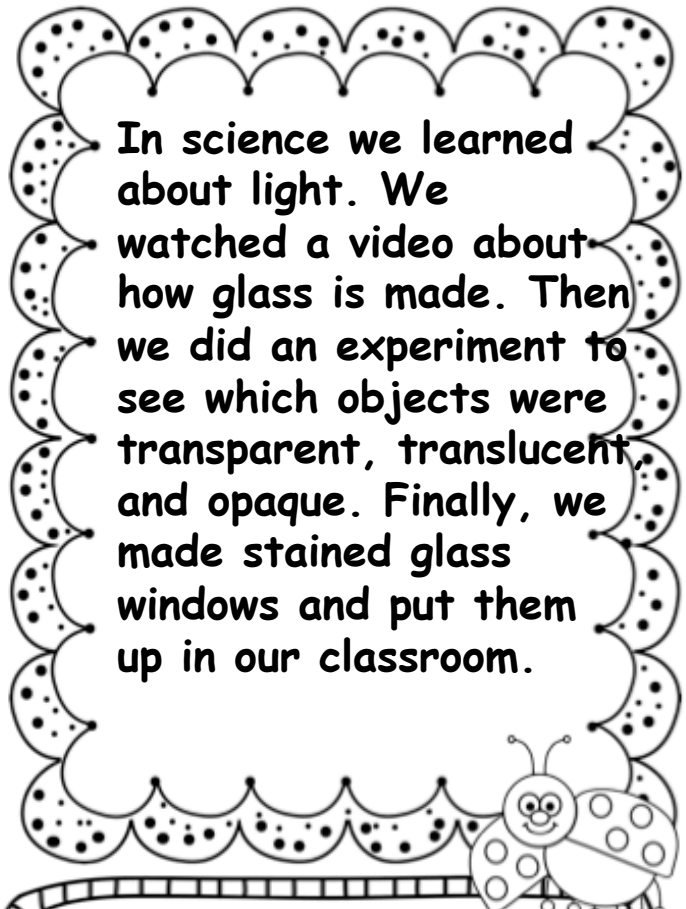

This month's nutrition goal is to eat more vegetables. We can do that by eating our veggies first and putting veggies in a smoothie at breakfast. In nutrition class we made kale chips and smoothies. Delicious!

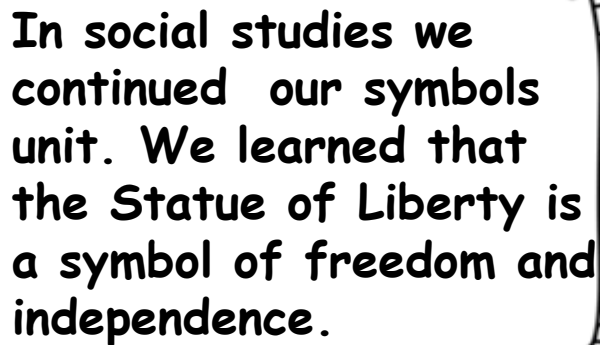

In math we are working on how to find all the different combinations of a number.

In science we learned about light. We watched a video about how glass is made. Then we did an experiment to see which objects were transparent, translucent, and opaque. Finally, we made stained glass windows and put them up in our classroom.

In social studies we continued our symbols unit. We learned that the Statue of Liberty is a symbol of freedom and independence.
