

First Grade Newsletter

In math we are playing games and solving problems with tens and ones. For example, Build 40 add 50. How many now?

In science we learned about the stars. We did an experiment to show that the stars are always there but we can't see them because of the sun's light.

Next week first grade will do MAP testing. MAP shows student growth throughout the year.

In social studies we finished our biomimicry inventions and shared them with the class.
